

WONDERLEAF

RAW - STRAIN SPECIFIC - UNCUT

WHO ARE WE?

WonderLeaf is a small-batch, craft producer of raw, uncut, and strain-specific CO2 concentrates.

We are a small, family-owned company based in Aurora, Colorado.

We are dedicated to improving our community and working to push the industry forward.

Our size allows us to constantly improve our process, be flexible, and able to address all questions, inquiries, and issues quickly and to your satisfaction.

HIGH QUALITY, HIGH POTENCY OUR APPROACH TO EXTRACTION

RAW AND UNCUT

Our oil is made using only pure, raw cannabis oil and strain-specific, cannabis-derived terpenes.

We have never, and will never use any additives or preservatives in our oils.

We always make it our goal to produce a clean, safe product that is as close to flower as possible.

SMALL BATCH

Our core focus is creating a craft product with an artisanal touch.

We are strain specific because we care about the unique qualities of every strain we process.

We maintain the native cannabinoid and terpene ratios of each strain in our oil, so that it tastes and feels exactly like the flower they are extracted from.

FROM GREEN TO GOLD

It all starts with the plant. We personally inspect each grow we work with to ensure their growing methodology is clean and pure.

Save those terpenes. Each extraction begins by gently isolating terpenes from freshly ground material before decarboxylation. Terpenes are easily destroyed, and this ensures each strain maintains its unique and complex flavor profile.

Low and slow. We use CO2 in a sub-critical state, meaning we can be gentle with our material. We are able to target specific materials (sap, oil, lipids, etc.) in the machine by changing the density of the CO2.

Never winterized, never distilled. Our oil comes out in fractions, and these are combined to make both pen and syringe oils. We run these combinations through a mechanical filtration process to remove or break down lipids. The care we take in the machine means that our oils never need to be chemically altered in any way.

Faithful to the flower. When our products are ready, we reintroduce the terpenes. Because we only use terpenes extracted from the cannabis plant (and never artificial or botanical terpenes) our products wind up with a more complex and complete flavor profile that is true to the strain.

WONDERLEAF

RAW - STRAIN SPECIFIC - UNCUT

OUR PRODUCT LINE

What started it all - the Cartridge.

- 510 thread
- Glass and stainless steel
- Top-pulling; won't leak from bottom
- Works with any push-button battery
- Contains our highest quality oil - average potency of 85%

The newest addition to the family - Disposable 250mg.

- CCell technology
- Glass and stainless steel, with a beautiful wooden tip.
- Same high-quality, high-potency oil as our cartridges

Our "Not so Basic" Basic Syringe.

- Child-resistant Twistspenser syringe
- Doesn't look like a hypodermic needle
- Best for infusions, lining a joint, or dabbing
- Dab right into your banger using the attached 440 stainless steel tip
- Current average around 78% total cannabinoids.

A Premium Smoke - our Premium Syringe.

- Child-resistant Twistspenser syringe
- Guaranteed total potency of 75% or higher - current average is 82%.
- Chosen on a batch by batch basis - these meet higher standards for clarity, color, terpene content, and potency.
- This oil looks beautiful filled into an empty cartridge - yum!

Rich, Luxurious, Soft As Can Be - our LuxeLeaf Body Butter.

- Crafted and infused in house using only raw, natural ingredients.
- 1:1 formula - each jar contains 50mg THC and 50mg CBD.
- Currently available in two scents: Liberation (tea tree, peppermint) and Harmony (vanilla, jasmine, rose, lavender).
- Intended as a luxuriant, hydrating, softening body butter in addition to providing the benefits of a cannabis topical. Treat yourself!

Simple, Wonderful - WonderLeaf Brand Battery

- Variable-voltage, push-button battery
- Works perfectly with our 510 thread cartridges.
- Lower voltages for the most terpene payoff
- Preheats for 15 seconds at 1.8v - perfect for cold winter mornings, or thicker viscosity oils.
